Thickness of Unconsolidated Deposits, Lower Yellowstone River Area: Dawson, Fallon, Prairie, Richland, and Wibaux Counties, Montana

by

Larry S. Smith

Introduction
The map depicts the distribution of unconsolidated deposits in the Lower Yellowstone River area of northeast Montana. The deposits are primarily sand, gravel, and organic material that are prevalent in the area.

Map Interpretation
The distribution of unconsolidated deposits is shown in the map. The deposits are primarily found along the river and in the surrounding areas. The deposits are characterized by their color and texture, which provide information about their age and origin.

Map Data
The data used to create the map were obtained from various sources. These include aerial photographs, satellite imagery, and field observations. The data were compiled and processed to create a detailed map of the unconsolidated deposits.
